

Environmental Principles

At TIRONI, we are committed to reducing the negative climate impact of our own operations and value chains, to offset our consulting footprint. In addition to complying with applicable laws, regulations and other environmental obligations, in 2022, we began an active process of identifying, measuring and offsetting our impact.

- 1. Identify, measure and offset the environmental impact of our operations.** Integrate environmental management into the organization's administrative tasks, basing its work on goals and action indicators.
- 2. Invest in new technologies and infrastructure to help us minimize our footprint.** Achieve greater energy and water efficiency through the renovation of facilities.
- 3. Reduce our environmental impact through organizational awareness initiatives.** Encourage our consultants to reduce their carbon footprint through non-essential travel limitation policies, reduced printing, and taking care of the environment during remote working.
- 4. Ensure sustainability in our supply chain and service delivery.** Communicate our working principles to our suppliers to guarantee our actions throughout the chain, favoring those with similar environmental practices.

Our commitment also includes assisting our clients in environmental conservation, protection and coexistence, addressing the legitimate concerns of various stakeholders (communities, authorities, suppliers and public opinion), and integrating them as a central element of our reflection and consulting process.
